

Feed On Offer

- This guide is designed to help users estimate the Food On Offer (FOO) of chicory and lucerne pastures. FOO is the total amount of green and dead pasture available to the animal. It is measured in kilograms of dry matter per hectare (kg/DM/ha). Look at the height, density and ground cover to find the picture that best matches your pastures. Estimating FOO can assist with feed budgeting and when used with pasture quality information, can assist you to predict livestock performance.

Winter Lucerne

400 kg DM/ha FOO

2500 kg DM/ha FOO

1100 kg DM/ha FOO

3100 kg DM/ha FOO
